CICD-to-GPU-Projects

Example Code

Example Code

`app()`

A sample function that checks if CUDA is available.

This function serves as an example template for checking the availability of CUDA-enabled GPUs in a PyTorch environment.

> ✏ **Prints**
>
> A boolean value indicating whether CUDA is available.

" Source code in `src/main.py`

```
 3    def app():
 4        """
 5        A sample function that checks if CUDA is available.
 6
 7        This function serves as an example template for checking
 8        the availability of CUDA-enabled GPUs in a PyTorch environment.
 9
10        Prints:
11            A boolean value indicating whether CUDA is available.
12        """
13        print(torch.cuda.is_available())
```
